Objective:

Software Engineering student at COMSATS University with hands-on experience in **Flutter, Full Stack Development, React.js, Node.js, REST APIs, and AI-powered applications**. Experienced in building **scalable web and mobile applications**, integrating **payment systems (Stripe)**, and developing **AI tools using Gemini APIs**. Seeking a **Software Engineer / Full Stack Developer internship** where I can contribute to building efficient and user-focused software solutions.

Education:

Bachelor of Software Engineering, COMSATS University Islamabad, Vehari *Expected June 2027*

Skills:

Technical Skills:	Express.js, Flutter, React.js, Node.js, Android Development, REST APIs, Full-stack Development, Stripe Integration
Languages:	C++, Python, PHP, JavaScript, Dart, Java
Databases:	MySQL, SQL Server, PostgreSQL (Supabase), Firebase Firestore
Version Control:	Git, GitHub
Tools:	Jira, VS Code, Android Studio
Platforms:	Windows

Experience:

Frontend-Intern – Tkxel *Aug 2025 – Sep 2025*
Lahore, Pakistan

- Enhanced 10+ high-fidelity landing pages and newsletter layouts, improving cross-browser compatibility by 20% and ensuring 97% alignment with UI/UX design specifications.

React.JS – Internee.pk *Jan 2026– March 2026*
Remote

- Expanded production-level capabilities across 7+ tasks, including an AI-powered resume analyzer, a full-stack E-commerce platform with secure payments, and a persistent AI chatbot using Gemini APIs.

Virtual Job Simulations – Forage *Oct 2025 – Feb 2026*
Remote

Completed hands-on simulations from **Mastercard, AWS, Citi, and Electronic Arts**, solving real-world engineering and cybersecurity scenarios.

- Cybersecurity (Mastercard):** Identified 15+ critical phishing vulnerabilities and Formulated a security training program that simulated real-world attacks to educate 50+ virtual employees on threat mitigation .
- Solutions Architecture (AWS):** Designed scalable hosting architecture using AWS Elastic Beanstalk and documented technical cost-benefit analysis.
- Software Development (Citi):** Built a real-time credit risk visualization tool in Java and created UML state diagrams for loan systems.
- Software Engineering (Electronic Arts):** Proposed game feature improvements, optimized C++ data structures, and designed UML class diagrams.

Featured Projects:

Finance Tracker — Personal Finance Management App *Laravel 11, PHP 8.2, PostgreSQL, Bootstrap 5, JavaScript*

- personal finance app featuring real-time balance tracking, analytics, and interactive dashboards with a mobile-first glassmorphism UI.

Deen-Mate — Islamic Companion App (Flutter) *Flutter, Firebase, GetX, REST APIs*

- Engineered a feature-rich Islamic mobile application with Quran reading, prayer time calculations, Qibla compass, and background audio streaming using Firebase and multiple REST APIs with offline-first support.

AI-Powered Resume Analyzer *React, Node.js, Express, MongoDB, Google Gemini AI*

- Architected a MERN-based AI platform that parses resumes, performs semantic job-matching with ATS keyword analysis, and delivers personalized career insights using Google Gemini models.

Plan & Track — Task Management Application (Flutter) *Flutter, Dart, SQLite, Provider*

- Engineered a mobile task management application supporting recurring tasks, subtasks with progress tracking, local notifications, and data import/export with customizable themes.

Smart POS & Inventory Management App *Flutter, Firebase, SQLite, Provider*

- Built a business management mobile app with POS checkout, inventory tracking, customer ledger, offline-first data handling, and automated Google Drive backups with cloud sync.
